

## **Energenie Grants UK Business 2010 Wish** *Saving Planet and Pounds in One New Range*

**13 January, 2010** – Energenie, the manufacturer of the latest automatic standby shutdown technologies, today announces the launch of its new energy saving business product range, available immediately from [www.energenie4u.co.uk](http://www.energenie4u.co.uk).

Energenie provides a simple way of reducing the amount of energy consumed and the money spent through the use of electrical appliances with their innovative range of standby shutdown switches.

As Britain's businesses become more conscious of energy saving measures and carbon footprint targets, Energenie can help make a big difference by taking a proactive approach to power management.

Alan J. Tadd, Managing Director, Energenie, commented: "People seem less concerned about energy consumption in their office than they are in their homes. However, British businesses waste huge amounts of energy every year and there are very simple measures that can be taken to cut this significantly.

"If all the offices in the UK stopped wasting power by leaving appliances on standby, this would be a huge step in the right direction."

Energenie's products for the office include:

- The Automatic Standby Shutdown for Offices – ideal for the busy part of the office where all the essential equipment is plugged in, such as computers, monitors, scanners and printers. Make sure energy and money isn't wasted by continuously leaving appliances on. The Standby Shutdown has 4 controlled sockets to connect you computer and peripherals to. There is also one permanently on socket for equipment that requires continuous power. Use the button on the flying lead to switch back on.

- Radio controlled socket – ideal for hard to reach plugs or for people who have restricted mobility. It is 13amp rated and can be used with any UK domestic appliance.

- Radio Controlled Extension Lead - ideal for hard to reach plugs or for people who have restricted mobility as it can be used with any domestic appliances. Each socket can be individually controlled or switched en-block.

- Automatic Standby Shutdown – There are more than 80 million TVs in Britain, with most of them left constantly on standby. Energenie's Automatic Standby Shutdown switched TVs and other electrical appliances off after 1 minute of inactivity, saving money, saving energy and reducing the risk of fires.

- Energy Power Saving Meter - Discover what appliances are the worst offenders in your household for wasting the most electricity. Find out how much appliances are costing in terms of money and their carbon footprint.

- 10 Gang Extension – optionally with surge protection for use in the busy part of the office where extra sockets are needed. The 10 gang extension socket helps keep everything nice and tidy and all plugged at the same location.

Energenie is recommended and certified by the Energy Saving Trust. For more information about Energenie's range of products for the home and the office, please visit [www.energenie4.u.co.uk](http://www.energenie4.u.co.uk).
