LED Spotlights

Low energy retrofit spotlights for display and domestic use

LED spotlights are ideal replacements for halogen and filament bulb lighting with low power, long life and high stability and achieving up to 85% power saving.

The future of lighting lies with LED technology offering advantages in performance, energy saving, lifetime, flexibility, ruggedness, environmental friendliness and paving the way for a whole new experience in lighting.

Traditional spotlights are ideal candidates for replacement with a simple exchange of bulbs. LED bulbs are available for mains or low voltage 12V AC/DC retrofit making them ideal for display use, kitchen and bathroom fit amongst others.

Lifetime savings make them economical to run and maintain. Features such as dimming with standard dimmers and selection of light colour to fit the application environment. Cool white lights are often preferred in display areas and in kitchens and bathrooms with black and white and metallic finishes. The warm white colour is often selected for domestic settings where softer colours and themes are preferred. Natural light is also an option where daylight-simulated light is preferred and in outdoor applications.

LED technology with high luminous efficacy and longevity
- Instant start
- Environmentally friendly, lead and mercury free
- Solid Construction with plastic lens, aluminium and plastic body with high shock and vibration resistance leading to increased reliability
- Radiation friendly: No ultraviolet or infrared radiation. No radio interference, electric wave resistant
- No glass tube to shatter, no mercury so safer for food industry applications.

CE approvals
- ROHS Compliant to 2011/65/EU
